

Portable Microscopes

These instruments are designed to be used in environments where standard microscopes are difficult to use or where there is a requirement for mobile observation of components. They are very robust and have the same high quality optics and measuring graticules used in full size instrumentation.

All the models listed have a rotary knurled sleeve which provides a fine focus. The design allows observation in most lighting but a battery operated torch is supplied for use in really low light conditions. The open frame design also allows conventional exterior lighting to be used.

General

Order Code	Magnification	Field or view	Graticule spec.
MIC:001	x 20	6 mm	4mm scale in 0.02mm
MIC:002	x 40	2.5 mm	2mm scale in 0.01mm
MIC:003	x 80	2 mm	1mm scale in 0.01mm
MIC:004	x 100	1.3 mm	1mm scale in 0.01mm
