

The WIRA Rapid Regain Dryer is a robust bench top unit for the rapid drying of samples of wool or other fibres for regain testing. The unit is designed to withstand the rigours of a production environment and is equally at home in the plant or laboratory.

The single sample canister can hold up to 250 grams of fibre.

A solid-state electronic controller maintains the air temperature at the selected set-point and the temperature is indicated on the digital display.

The integral timer alerts the operator at the end of the drying cycle. The sample is immediately weighted and the regain calculated.

All components are designed for ease of maintenance and servicing.

Features:

- Rapid drying of fibres
- Cycle Timer
- Compact for bench top use
- Easy to use and maintain
- Replaceable air cleaning filters
