The Wira Carpet Tile Thickness Gauge is specially designed for quick and repeatable measurements of tile thickness. The base plate can accommodate carpet tiles up to 500mm x 500 mm. The carpet tile is located in position by means of two raised edge guides. The presser foot applies a pressure of 2 kPa as specified for testing textile floor coverings and measuring the thickness at a position 106 mm from the corner, on the diagonal.

The thickness is displayed on a digital indicator gauge that automatically zeros at the press of the button. The standard gauge measures specimens up to a thickness of 25 mm.

The digital gauge can be connected to a PC by means of a cable (optional) and data collected using software package (optional).

A set of weights to produce pressures of 5, 10, 20, 50, 100, 150 and 200kPa to carry out the compression and recovery test are available as an option.

Dimensions: 615mm (W), 615mm (D), 500mm (H)

Key Features
✓ Quick and convenient
✓ Easy to use
✓ Optional software to record results
✓ Includes a range of standard weights

Order Code: TTG:001

Options:
Download Software – TTG:SCF
USB Cable – TTG:CBL
Weights for compression and recovery test – TTG:WGT
